

LifePoints

A simple story about our app — written so anyone can understand it.

What is LifePoints?

LifePoints is like a **sticker chart for grown-up goals**. You pick good habits. When you do them, you get points. More points = you did more good things!

1. The big idea

Imagine three jars on a shelf:

Jar 1: You

Your account. Your email. Your password. Your points.

Jar 2: Habits

Things you want to do, like “Run” or “Read”.

Jar 3: Completions

A note that says “I did this habit today!” and how many points you earned.

When you press **Complete**, the app puts a note in Jar 3 and adds points to Jar 1.

2. How you use it (step by step)

1. **Start the app** on your computer with `bin/dev`.
2. **Open** the website (usually `http://localhost:3000`).
3. **Sign up** (new account) or **Sign in** (already have one).
4. Go to **Habits** and make a habit (example: “Morning run”, 10 points).

5. Go to the **Dashboard**.
6. Press **Complete** when you finish that habit today.
7. Watch your points go up!

Demo login (for trying it)

Email: `demo@lifepoints.test`

Password: `password`

This demo user already has a few sample habits.

3. What each screen does

Dashboard

- **Total points** — all points you ever earned
- **Points today** — points you earned just today
- **Today's habits** — habits you can complete
- **Recent activity** — the last things you finished

Habits page

- Make a new habit
- Edit a habit
- Delete a habit
- Turn a habit on/off (active)

4. The rules (important!)

- You can complete each habit **only once per day**.
- Points must be a number bigger than 0.
- A habit needs a name.
- Only **you** can see your habits (your account keeps them private).

5. What's inside the code (simple map)

Think of the app like a restaurant:

- **Views** = the menus you see (HTML pages)
- **Controllers** = the waiters (they take your click and do something)
- **Models** = the kitchen recipes (User, Habit, Completion)
- **Database** = the fridge (stores your data in SQLite)

Main folders

- `app/models/` — User, Habit, Completion
- `app/controllers/` — Dashboard, Habits, Completions, Sessions
- `app/views/` — the pages you look at
- `db/migrate/` — instructions that built the database tables
- `db/seeds.rb` — demo user + sample habits

6. What we built for the MVP

- Sign up / Sign in / Sign out
- Create, edit, and delete habits
- Complete a habit and earn points
- Dashboard with totals and recent activity

- Live update when you complete (no full page reload)
- Tests to make sure the happy path works

7. What we did NOT build yet

(These can come later)

- Streaks (days in a row)
- Charts and graphs
- Email reminders
- Phone app install (PWA)
- Leaderboards / friends

8. How to start it again later

1. Open a terminal
2. `cd /home/mv/code/lifepoints`
3. `bin/dev`
4. Open the URL in your browser
5. Sign in and earn points!

LifePoints MVP Guide — made so you can print it, keep it, and explain the app to anyone.

Tip: In your browser, use **Print** → **Save as PDF** to keep a PDF copy.
